

Kingsburg High School Math Pathways for the Class of 2018+

Notes:

- Every student in grades 9, 10, and 11 will take a math class.
- While there is a 30-credit math graduation requirement, it is highly recommended that students take a math class their senior year to prepare for both college or career tests.
- If a student receives a letter grade D in a college preparatory class and is going to a 4-year college, that class should be repeated. If a student repeats a math class in which a letter grade D or higher was earned, the repeated class counts as an elective, not as part of the 3-year math requirement.
- Dashed arrows are used to indicate student who have failed a math class
